Note: Use IPS #2795 or equivalent to glue into PVC fittings or saddles. Jain vinyl IPS pipe and irrigation hose are designed for use in irrigation systems. They are not for use on indoor systems or for static flow, continuous pressure(no-flow) conditions, hot water, or as potable water service pipe. Use caution in above ground applications, as the pipe could be subjected to higher operating temperatures. High temperatures will greatly reduce pressure-holding policy.

"The Raphael Valve is the only one I will use. I can easily set the pressure to exactly what I want and it doesn't change. The valves function well over time and are very dependable."

Jain Hydraulic Valve Functions

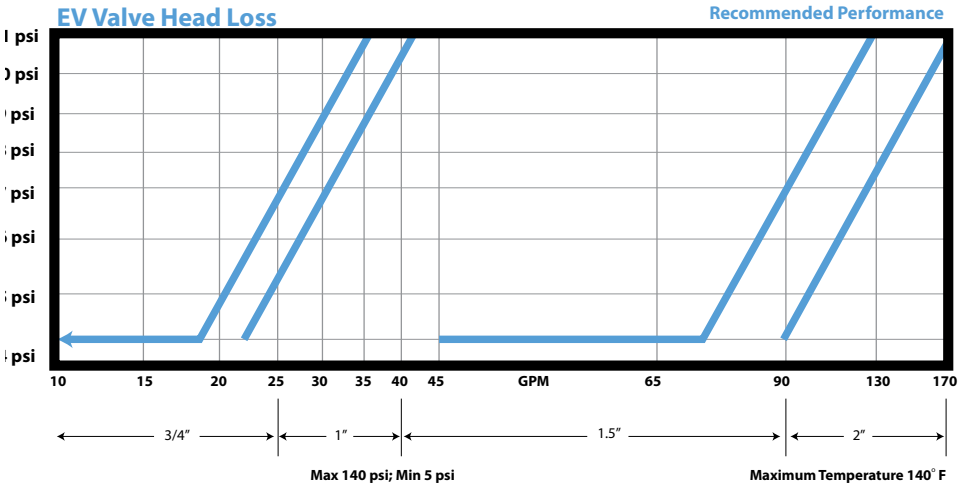

- Select the desired valve function from the table below
- Size the valve body using the performance charts
- Use the valve body and valve function on the price table to find list price.
- Order the exact model using the Model Builder below

	Hydraulic Valve Functions
B	Basic Body with diaphragm, bonnet and bonnet bolts, includes Schrader valves upstream and down stream for checking pressure. Unused ports are plugged.
M	Manual valve, B plus a 3 way manual selector valve, required tube and fittings
MEL	Manual Electric valve, M plus a solenoid for automatic operation via a controller.
MRC	Manual Remote Control valve, M plus a Hydraulic Relay for remote automation via hydraulic lines.
PRM	Pressure Reducing Manual valve, M plus a pressure reducing pilot. Pilot monitors down stream pressure and reduces down stream pressure by partially closing the valve so that the set down stream pressure is not exceeded.
PRMEL	Pressure Reducing Manual Electric valve, PRM plus a solenoid for automatic operation via a controller.
PRMRC	Pressure Reducing Manual Remote Control valve, PRM plus a Hydraulic Relay for remote automation via hydraulic lines.
PSM	Pressure Sustaining Manual valve, M plus a pressure sustaining pilot. Pilot monitors upstream pressure and restricts down stream flow to maintain upstream set pressure. Also functions as a Pressure Relief valve when discharged to atmosphere. Also functions as a Slow Opening valve to control fill flow rates.
PSMEL	Pressure Sustaining Manual Electric valve, PSM plus a solenoid for automatic operation via a controller.
PSMRC	Pressure Sustaining Manual Remote Control valve, PSM plus a Hydraulic Relay for remote automation via hydraulic lines.
PSPRM	Pressure Sustaining Pressure Reducing Manual valve, combination of a PSM and PRM valve. Valve will be sustaining until set upstream pressure is met. After upstream pressure is met down stream pressure with will be reduced to maintain set down with stream pressure.
PSPRMEL	Pressure Sustaining Pressure Reducing Manual Electric valve, PSPRM with a solenoid for automatic operation via a controller.
PSPRMRC	Pressure Sustaining Pressure Reducing Remote Control valve, PSPRM with a hydraulic Relay for automatic operation via hydraulic lines.
QR or 2PS	Quick Reacting Pressure Relief valve or 2 Way Pressure Sustaining valve. This is the 2 way version of the PSM valve less the manual 3 way selector. It reacts quickly but is more susceptible to dirty water plugging.
2PR	Pressure Reducing valve, this is the 2 way version of the PRM valve less the 3 way selector. It reacts quickly but is more susceptible to dirty water plugging.
2PR2PS	Pressure Sustaining and Pressure Reducing valve. This is the 2 way version of the 2PS & 2PR It reacts quickly but is more susceptible to dirty water plugging.

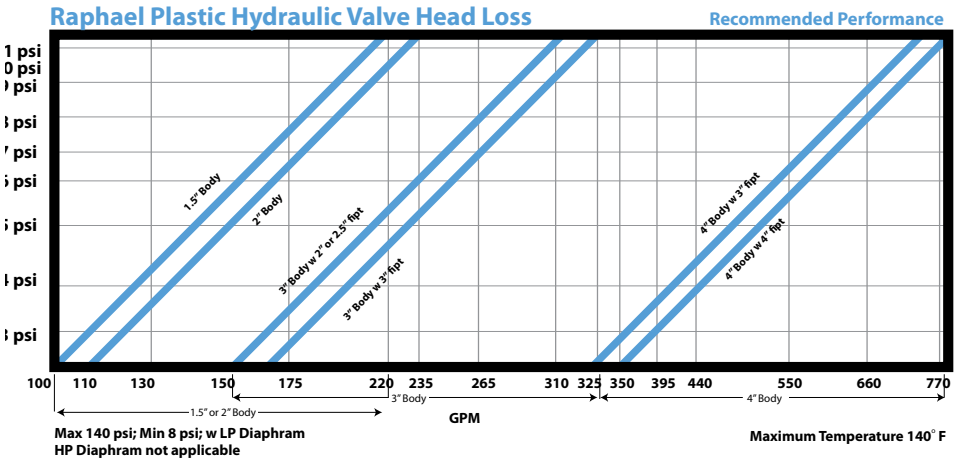

Other functions available by special order.

Performance Charts and Sizing

Locate design flow on the lower horizontal axis. Move vertically until you hit a red line. This line indicates the value size you should use. If you ca continue vertically and intersect another red line this line also indicates a valid valve size. The higher line is less expensive but has more head loss. The lower line is more expensive but has less head loss. Move horizontally to the left from the point of intersection to read the corresponding head loss on the left vertical axis.

JAIN Logic Features

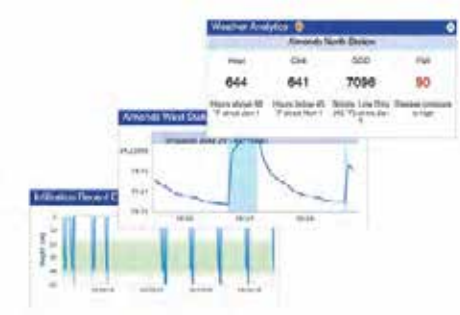

Soil Moisture Monitoring

Take the guesswork out of irrigation. Soil moisture monitoring is a core component of JAIN Logic. Soil moisture monitoring provides valuable information about what is happening below the surface of the soil. It provides confidence irrigations are meeting your crop needs without wasting important inputs like water and nutrients.

Agronomic Tools / Widgets

A wide variety of tools create charts from field data and raw numbers, create useful information helping you make faster and more powerful decisions.

Irrigation Scheduler

Managing your irrigation schedule shouldn't be another time-consuming task in a busy day. Take the guesswork out of your irrigation decisions. The irrigation scheduler provides a simple way for growers to create a weekly irrigation schedule by irrigation set. It integrates directly with notifications, so growers can easily share schedules electronically or in hard copy with staff.

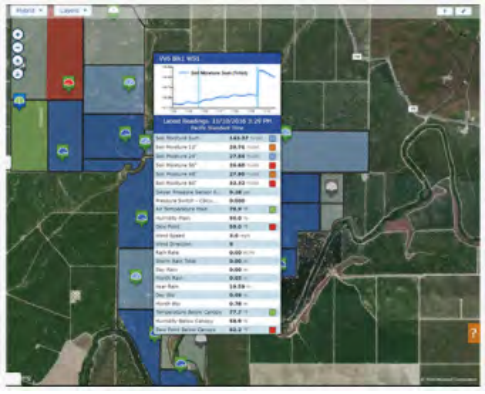

Data Management

JAIN Logic provides robust soil moisture and field condition monitoring data that is reliable and secure. JAIN Logic provides analysis and presentation tools allowing you to use your field data to simplify irrigation decisions.

Why JAIN Logic?

JAIN Logic has spent over a decade going beyond simply providing data. Our system goes a step further to analyse the data then put it in a format that helps our customers better manage resources and increase crop yield.

JAIN C3 Field Station

A flexible monitoring and control platform the JAIN C3 is the heart of the Jain Monitoring and Control system. The JAIN C3 can be configured to use as a simple pump controller or as a gateway to manage a network of C3's and monitor a complete irrigation system.

C3 Telemetry Unit

The JAIN C3 Field Station can remotely monitor a large range of agricultural and irrigation equipment with integrated access to the JAIN Logic software platform for data management and system control.

The C3 delivers unparalleled functionality, tailored to meet the requirements of any monitoring and control scenario. The JAIN C3 is available with a number of wireless communication options, allowing remote access to your equipment at the most optimal cost. The lithium battery technology and remote diagnostics functionality means minimal maintenance and reduced operating costs.

Selecting Orifice Size

Maxijet orifice sizes are distinguished by color. When ordering jets and bases, it is important to understand the distinction between colors and how those colors are represented within product part numbers. Here is a quick reference key followed by example part numbers:

Color	Orifice Size	Letter Designation Within Part Numbers
Black	.03"	B [MAB36E1]
Orange	.033"	O [MAO36E1]
Blue	.04"	U [MAU36E1]
Violet	.044"	V [MAV36E1]
Green	.05"	G [MAG36E1]
Yellow	.055"	Y [MAY36E1]
Red	.06"	R [MAR36E1]
White	.07"	W [MAW36E1]

Note: When Caps and Deflectors are assembled on a BLACK base, the letter designation is "C" instead of "B"

THIS IS WHAT UNIFORMITY LOOKS LIKE

MADE POSSIBLE WITH A PRODUCT PACKAGE LIKE NO OTHER.

ROTATOR® TECHNOLOGY IS CERTAINLY MAKING ITS MARK ON SOLID SET IRRIGATION.

The R2000WF has been effectively obsoleting 1/2" brass impacts everywhere by providing superior uniformity in real-world conditions. Imitation products just don't compare.

NELSON

DRAIN CHECK

Combine the R2000WF with a Mini Regulator Drain Check or Mini Drain Check and you ensure no drain down on system start up and shut down. Pressure regulation means each sprinkler is putting out the same amount of water further contributing to high crop uniformity.

CONTROL VALVE

2", 3" & 4" 1000 SERIES. Nelson's new plastic, low profile, sleeve-style valve is great for zone control. A completely pressurized system maximizes irrigation efficiency. The 2" size has a spline connection option which allows for easy installation with plastic pipe.

AUTOMATION

TWIG® WIRELESS CONTROLS. Simply connect Nelson TWIGs to Nelson Control Valves and tie into the TD200 Controller to automate new or existing installations. Automatically cycle the valves in a programmed sequence for precision germination and irrigation.

PROBLEM

"The onions at the end of the rows aren't as uniform in size as the interior plants because they're not getting proper overlap in watering."

SOLUTION

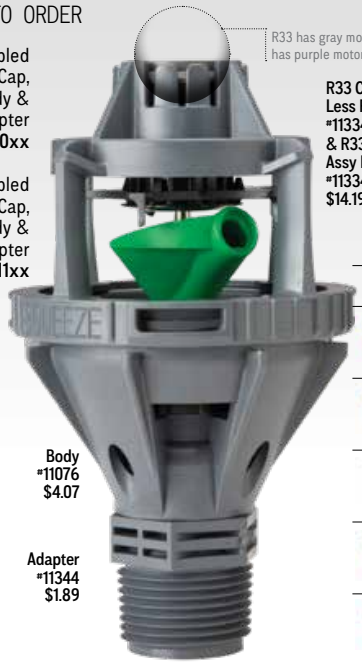

"The PC-R2000WF is a Part-Circle Rotator that distributes water in a 190 degree arc. It is intended to irrigate the edge of a field where full circle Rotators are used in the interior. Designed with uniformity in mind."

DIRECT 3/4" IMPACT REPLACEMENT

While brass sprinklers are prone to damage, clogging and theft, the R33 is easy to clean, easy to repair and costs less to replace. Without a drive arm, the sprinkler creates no riser vibration. It also has a long wear life because no seals or bearings are exposed to water pressure. The R33 is also available in a low pressure model, the R33LP.

QUICK-CONNECT
FITTINGS FOR DETACHABLE RISERS

WHY DETACHABLE RISERS? Solid set irrigation with Rotators is an excellent way to irrigate small and irregular-shaped fields. However, the process of moving pipe in and out of the field several times a season is costly and problematic. Inexpensive yet rigid detachable risers can be quickly and easily moved out of the way of farming operations, then easily reinstalled when it is time to irrigate. Now with two sizes of Nelson ACME Adapters, growers can choose from a wide range of Rotator® Sprinkler flow ranges for their specific needs. ACME threads allow users to rethread risers while the system is pressurized, and not cross-thread the risers. The ½" ACME thread is used in 10 Series and 2000 Series Rotator sprinklers. The new ¾" ACME threaded fittings are based on the ACME thread used in the R33. With these new ¾" ACME thread fittings, Detachable Risers can have higher flow rates and be taller than ever before.

A. SHALLOW CULTIVATED CROPS REQUIRE A BURIED DETACHABLE RISER.
B. DETACHABLE RISERS FOR CRANBERRY AND ALFALFA PRODUCTION.
C. SLEEVE-PROTECTED DETACHABLE RISERS IN PASTURES & FORAGE CROPS.

IRRIGATION DESIGN SOFTWARE

Overlap Pro

Overlap is an online software program (**www.overlappro.com**) capable of analyzing the theoretical uniformity of permanent or solid set sprinkler spacing. Select a specific sprinkler model configuration and spacing criteria, and the software will calculate the following:

- Precipitation Rate
- Christiansen's Coefficient of Uniformity (CU)
- Distribution Uniformity (DU)
- Scheduling Coefficient (SC)

Overlap also allows you to graphically depict and chart theoretical performance for comparative purposes. Please contact us for more information.

Find out more – go to www.irricad.com. IRRICAD is a standalone, graphically based, computer-aided design package developed specifically for designing pressurized irrigation or water supply systems. IRRICAD is far more than a drawing package because it combines the advantages of CAD drawing with powerful hydraulic pipe sizing and network analysis techniques, and it also provides automatic selection of pipe fittings, thereby generating a complete bill of materials. Systems can be designed to cover a full range of functions including:

- Sprinkler/Micro sprinkler
- Drip/Drip Tape
- Nursery
- Dust Suppression
- Mainline Networks

A PVC STAKE IS INEXPENSIVE, PROTECTS THE TUBING, AND IS MUCH STRONGER THAN OTHER MICRO IRRIGATION STAKES.

Shallow bury the poly-ethylene lateral tubing for protection and to anchor it in place. Shallow bury the feed tube for protection.

ROTATOR® FEEDTUBE ASSEMBLIES

PROBLEM

"Coyotes keep chewing on all of our feedtubes. I need a heavier duty option."

SOLUTION

"Switch over to PVC Stake Assemblies and eliminate those tubing repairs. Shallow bury the lateral tubing and eliminate even more problems.

MULTI-OUTLET DRIPPER ASSEMBLIES

For a complete assembly, order one **A** Manifold Assembly and one **B** Woodpecker Pressure Compensating Junior Dripper.

The flow per arrow dripper is equal to the dripper flow divided by the number of arrow drippers on that assembly. To ensure plants will receive equal water flow, use the same assemblies on each zone.

SPRINKLER, MISTER AND FOGGER ASSEMBLIES

ORDERING GUIDELINES

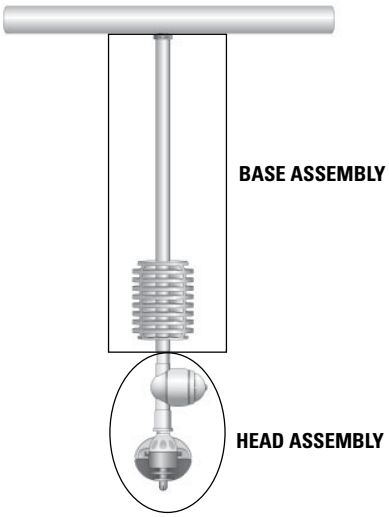

Ordering Netafim sprinkler, mister and fogger assemblies is a simple two step process:

1. Select a Sprinkler, Mister or Fogger head based on application:
   - Watering: Sprinkler
   - Germinating: Mister
   - Humidifying or Cooling: Fogger
2. Select a Base Assembly based on the type of pipe used to supply water:
   - Polyethylene
   - Threaded pipe
   - Retrofit adapter for other manufacturer's fittings

The assembly is shipped as two parts (Head Assembly and Base Assembly) to be connected by the installer in the greenhouse.

Sprinklers/Misters: Use a 35 psi regulator and 120 mesh filter.
Foggers: Use a 65 psi regulator and a 140 mesh filter.

Use WinSIPP software by Senninger to calculate the precipitation rate of your irrigation system.

FEATURES

- Aids in the selection of the best irrigation products for each particular soil and installation type
- Tests the application uniformity of sprinkler layouts before the system is installed
- Compares different spacings, sprinkler models, nozzle sizes, and operating pressures

Senninger's regulators are designed to meet a variety of installation needs ranging from mechanized sprinkler installations to nursery and greenhouse installations.

Uncontrolled pressure fluctuations in irrigation systems result in unwanted flow deviations and over- and under-watering. These fluctuations occur with the cycling on of an end gun, engagement of a corner arm, variations in field elevation or water supply. Proper use of pressure regulators helps maintain the overall efficiency of an irrigation system and sprinkler performance.

Factors that can shorten a pressure regulator's life span include:

1) Unflushed chemicals in the pipeline
2) Suspended abrasive materials in the water
3) Long operating hours
4) Water hammer

Pressure regulators are recommended if there is a 10% pressure and/or a 5% flow variation. The lower a system's design pressure, the more critical it is to accurately control its pressure.

DESIGN PRESSURE	Pressure Variations			
	1 psi (0.69 bar)	2 psi (1.38 bar)	3 psi (2.07 bar)	5 psi (2.76 bar)
6 psi (0.41 bar)	8.3%	16.7%	25.0%	41.7%
10 psi (0.69 bar)	5.0%	10.0%	15.0%	25.0%
15 psi (1.03 bar)	3.3%	6.7%	10.0%	16.7%
20 psi (1.38 bar)	2.5%	5.0%	7.5%	12.5%
	% Flow Variation			

The basic function of a pressure regulator is to limit excessive and varying inlet pressures to a constant outlet pressure. Senninger pressure regulators are built of high-impact engineering-grade thermoplastics and are 100% factory tested.

PRESSURE REGULATOR EXTENDED-FLOW

The PRXF is designed to handle flows up to 100 gpm (22713 L/hr). It's ideal for installations requiring accurate zone pressure regulation, higher flows, including solid-set, low-volume irrigation systems, manifolds and mechanical-move irrigation systems.

CAUTION:
Always install downstream from all shut off valves.

The PRLV is designed to handle flows from 0.5 to 18 gpm (114 to 4088 L/hr). It is used in place of standard pressure regulators to limit static (no flow) water pressure when a shut-off valve is used downstream from a regulation point. This limits downstream pressure and protects downstream components.

CAUTION:
Recommended for outdoor use only.

PRESSURE REGULATING EXTENDED-FLOW LIMIT VALVE™

The PRXF-LV is designed to limit static (no flow) water pressure between a regulation point and a downstream shut-off valve, thus protecting in-line components. It's designed to handle flows up to 75 gpm (17034 L/hr).

CAUTION:
Recommended for outdoor use only.
